

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph at page 12, lines 14-27 (paragraph [0056]) with the following replacement paragraph:

**Replacement Paragraph**

[0056] Runner user interface 32 shows basic values relating to an activity to the user. These basic values include e.g. altitude, pitch angle, speed and heart rate. Sailor user interface 34 displays more complex values to the user, e.g. longitude and latitude, air pressure, ~~heasing,~~ heading, speed, temperature, various graphs etc. It can be seen from FIG. 3 that, for example, information provided by a barometer can be used in different ways for different purposes or sports. A runner wants to see changes in air pressure by means of altitude changes, where as a sailor is also interested in the air pressure itself. Furthermore, air pressure in function of time can be used to forecast a possibility of a storm.
